NEW!

Body protection with a durable and permanently elastic anti-gravel layer. Good acoustic and damping properties. Reproducing of OEM original coating structures on car bodies. Gentle structure of the threshold texture.

AVAILABLE COLORS

The product is intended for sealing and protection of overlapping and welded metal sheet joints of motor vehicle bodies. Reproducing of OEM original coating structures on car bodies.

AVAILABLE COLORS

STP SPRAYABLE SEALANTS ARE INNOVATIVE STP-BASED PRODUCTS THAT PROVIDE:

- fast hardening
- high durability and flexibility
- excellent adhesion to a wide variety of substrates
- high stability over time, and resistance to the weather
- paintable with waterborne and solvent products
- extremely long chemical activity: 10 days maximum
- good acoustic and damping properties
- isocyanate-free: does not irritate the skin or the airways during application
- reproducing of OEM original coating structures on car bodies

RECOMMENDED FOR:

The product consistency helps build textures with a higher spread. For application by air spraying only.

Helps build various finish textures when applied by air spraying and suitable nozzles; can be applied with caulking guns, brushes, and putty knives.
