

**Technical Data Sheet**

**BODY FILLER 1900 BUMPER FIX**

**Super elastic**

<b>PROPERTIES</b>		
<p>The <b>BODY FILLER 1900</b> is a putty for levelling the surfaces of plastic parts, e.g. bumper fascias, rear view mirror housings, strips and mudguards. The product has a very high elasticity and excellent adhesion to most plastics (except for polyethylene (PE) and Teflon (PTFE)). It also has good adhesion to polypropylene (PP) which enables application on non-primed surfaces.</p>		
<b>SUBSTRATES</b>		
plastics, except for PE and PTFE	degrease, mat with abrasive needle cloth and degrease again with the PLUS 780 silicone degreaser	
polyester laminates	dry sand with P80-P120 and degrease again with the PLUS 780 silicone degreaser	
steel	degrease, dry sand with P80 – P120, degrease again	
galvanised steel	degrease, mat with an abrasive finishing pad and degrease again	
aluminium	degrease, mat with an abrasive finishing pad and degrease again	
two-component acrylic fillers	degrease, dry sand with P220 – P280, degrease again	
old paint coatings	degrease, dry sand with P220 – P280, degrease again	
<b>CAUTION</b>		
<p>Do not apply the body filler directly on adhesion increasing agents (primers) (i.e. NOVOL PLUS 700), wash primers, one-component acrylic products and NC products.</p> <p>The body filler adheres to most types of galvanised steel used today.</p>		
<b>MIXING RATIO</b>		
	BODY FILLER HARDENER	Weight ratio
		100 g 2 g

APPLICATION LIFE FROM MIXING WITH THE HARDENER	
From 5 to 8 min at 68°F/ 20°C..	
DRYING TIME	
From 30 to 45 min at 68°F/ 20°C.. The time can be shortened by heating for 10 minutes at a maximum of 140°F/ 60°C	
COATABILITY	
Spray polyester filler and acrylic primers. If applying on plastics or components highly exposed to impact, the next layers (primer, topcoat) shall be made elastic with the PLUS 770 elasticity increasing agent.	
APPLICATION CONDITIONS	
The minimum application temperature is 50°F/ 10°C	
APPLICATION	
	Clean and sand the surface
	Degrease the surface with PLUS 780
* 	Apply the PLUS 700 elasticity increasing agent
* 	Apply PROTECT 300 or PROTECT 310 with the PLUS 770 elasticity increasing agent
	Observe the required amount of hardener. Mix the components thoroughly until a uniform colour is obtained. Weight quantity of components: Add 100 g of <b>BODY FILLER 1900</b> to 2 g of Hardener. Binding time: 5 to 8 minutes at 68°F/ 20°C.
	Apply a layer of 3 mm max with a putty knife.
	Wait for 30 to 45 minutes (68°F/ 20°C)

	rough	finish
	P120-P180	P180-P240
* when applying on polypropylene with a layer thickness over 1 mm, use two additional layers		
<b>COLOUR</b>		
Dark grey		
<b>CONTENT OF VOLATILE ORGANIC COMPOUNDS (VOC)</b>		
VOC II/B/b limit* = 2,086lbs/gal (250g/l)		0,751lbs/gal (90g/l)
*For ready to use mixture.		
<b>EQUIPMENT CLEANING</b>		
THIN 8500 or NC solvent, acetone.		
<b>STORAGE CONDITIONS</b>		
Store in a cool dry room, away from sources of fire and heat. Avoid direct exposure to sunlight.		
<b>SHELF LIFE</b>		
Body Filler	24 months/68°F/ 20°C.	
Hardener	18 months/68°F/ 20°C.	
<b>SAFETY</b>		
See Safety Data Sheet.		
<b>NOTES</b>		
Intended for professional use only.

<b>OTHER INFORMATION</b>		
<p>The effectiveness of our systems results from laboratory research and many years of experience. The data contained herein meets the current knowledge about our products and their application potential. We ensure high quality, provided the user follows the instructions and the work is performed in accordance with good workmanship. It is necessary to do a test application of the product due to its potentially different reaction with different materials. We may not be held liable for defects if the final result was affected by factors beyond our control.</p>
